Bloomin' Acres

PROJECT STATUS REPORT

Prepared by OphidianAI

March 7, 2026

Version 2.0

INTELLIGENCE, ENGINEERED.

Executive Summary

Full-stack e-commerce platform for a sourdough bakery and fresh produce business.

6.8
out of 10

OVERALL SCORE

SEO	**8 / 10** NEW
Navigation	**8 / 10**
Visual Design	**7 / 10**
Account Mgmt	**7 / 10**
Mobile	**7 / 10**
User Journey	**7 / 10**
Performance	**6 / 10** NEW
Checkout	**6 / 10**
Security	**6 / 10** NEW
Code Quality	**6 / 10** NEW

Tech Stack

HTML / CSS / JS · Supabase · Stripe · Vercel · Supabase Auth · Supabase Storage · Stripe Checkout · Stripe Webhooks

Project Status

AREA	STATUS	NOTES
Landing Page	LIVE	CMS-driven content, dynamic hero/cards/hours/contact
Public Menu	LIVE	Stripe product sync, section editor, draft preview
Product Pages	LIVE	Variations, stock tracking, inline admin editor
Customer Accounts	LIVE	Cart, favorites, orders, profile, club dashboard
Bread Box Club	LIVE	Subscriptions, box builder, referral rewards
Admin Dashboard	LIVE	7 tabs: catalogue, menu editor, saved menus, landing, orders, analytics, club

AREA	STATUS	NOTES
Checkout Flow	LIVE	Variation pricing and names verified working. CORS locked to production domain.
Performance	DONE	Images optimized (42 MB → 2.4 MB), shared JS extracted, fonts consolidated
SEO	DONE	Meta tags, Open Graph, JSON-LD, sitemap.xml, robots.txt deployed

What Changed

Updates since Version 1.0 (March 6, 2026)

Fixes Shipped

Checkout Back-Button Bug

Clicking checkout, then using browser back, would leave the checkout button permanently disabled. Fixed with `pageshow` event handler.

Favicon Added

All pages now show the Bloomin' Acres barn logo in the browser tab.

Basket Background 404

Cart panel background image was returning 404 after optimization. Fixed with WebP conversion from source.

Performance Optimization (Approach B)

Before / After Comparison

METRIC	BEFORE	AFTER	CHANGE
Brand assets size	42 MB	2.4 MB	**-94%**
Image format	PNG only	WebP + PNG	**Modern format**
Google Fonts requests	3 different	1 unified	**-67%**
Duplicated JS (nav)	6 copies	1 shared file	**-83%**
Duplicated JS (Tailwind config)	6 copies	1 shared file	**-83%**
Tailwind CDN	Unpinned	Pinned v3.4.17	**Cacheable**

Files Created

`js/shared.js` -- Navigation toggle, pageshow handler (shared across all 6 pages)

`js/tailwind-config.js` -- Unified Tailwind color/font config (both naming schemes)

`scripts/optimize-images.mjs` -- Image optimization pipeline (sharp)

Current Features

Customer-Facing Pages

Landing Page (index.html)

CMS-driven hero, product cards, hours, contact info. Admin-editable via landing tab.

Public Menu (menu.html)

Auto-synced from Stripe products. Section editor, drag-and-drop ordering, draft preview.

Product Detail (product.html)

Dynamic product pages with variation selector, stock badge, image gallery, admin inline editor.

Bread Box Club (club.html)

Subscription landing page with tier comparison, box builder, referral program, and member dashboard.

Account Dashboard

Cart & Checkout

Slide-out cart panel, quantity editing, Stripe Checkout redirect, order confirmation.

Favorites

Heart-toggle on product cards, persistent favorites list on account page.

Order History

Past orders with line items, totals, and status badges pulled from Stripe webhooks.

Profile Management

Name, email, phone, address. Password change via Supabase Auth.

Admin Dashboard

Catalogue Management

CRUD for products, variations, images, stock levels. Syncs to Stripe.

Menu Editor

Drag-and-drop section builder, product assignment, draft/publish workflow.

Landing Page Editor

Edit hero text, featured products, hours, and contact info in real time.

Order Management

View all orders, filter by status, mark as fulfilled.

Analytics

Club Management

Revenue chart, top products, order count, customer metrics.

Manage subscription tiers, view active subscribers, referral tracking.

Saved Menus

Save and restore menu configurations for seasonal rotations.

Backend & Integrations

Supabase Database

TABLE	PURPOSE	RLS
profiles	User profile data (name, phone, address)	ON
products	Product catalogue with Stripe sync	ON
product_variations	Size/type variations with price deltas	ON
orders	Order records from Stripe webhooks	ON
order_items	Line items for each order	ON
favorites	User product favorites	ON
cart_items	Persistent cart storage	ON
menu_sections	Menu layout configuration	ON
menu_section_products	Product-to-section assignments	ON
saved_menus	Saved menu configurations	ON
landing_content	CMS content for landing page	ON
subscriptions	Bread Box Club subscription records	ON
referrals	Referral tracking for club members	ON

Stripe Integration

ENDPOINT	PURPOSE
/api/stripe/checkout	Create Checkout Session for cart items
/api/stripe/subscribe	Create subscription checkout for Bread Box Club
/api/stripe/webhook	Handle payment confirmation, order creation
/api/stripe/config	Expose publishable key to frontend

Storage Buckets

BUCKET	PURPOSE	PUBLIC
product-images	Product photos uploaded by admin	YES
brand-assets	Logo, hero images, background textures	YES

Priority Issues

Open Issues

1. No Content-Security-Policy Headers SECURITY

No CSP headers on any page. All inline scripts run without restriction. Vulnerable to XSS injection if any user content is reflected unsanitized.

2. Massive Inline Scripts CODE QUALITY

`account.html` has ~1,200 lines of inline JS. `menu.html` ~340 lines. Not cacheable, not minifiable, not testable. Blocks HTML parsing on every page load.

3. No Order Review Before Payment CHECKOUT

Clicking checkout redirects straight to Stripe with no confirmation step. No order summary, no address review, no chance to catch mistakes.

4. Product Pages Lack Dynamic SEO SEO

`product.html` meta title/description is hardcoded as "Product -- Bloomin' Acres". Each product should have its own meta tags for search indexing. No canonical tags on any page.

5. Cart Has No Stock Validation UX

Users can add unlimited quantities without stock checking. No limit enforcement client-side or visible stock indicator in the cart.

6. No Guest Checkout UX

All purchases require account creation. No option for one-time buyers to check out without signing up. Potential conversion blocker.

7. Footer Nav Broken Link UX

`index.html` footer `href="#menu"` links to nonexistent anchor. Social media icons link to `#`.

8. Undersized Touch Targets MOBILE

Avatar button is 30x30px, below the WCAG 44x44px minimum. Form inputs lack adequate mobile padding.

Previously Resolved

ISSUE	STATUS
Checkout variation pricing bug	RESOLVED
Cart missing variation names	RESOLVED
CORS wildcard headers	RESOLVED
Missing SEO meta tags	RESOLVED
Checkout back-button disabled	RESOLVED
Copyright year inconsistency	RESOLVED

Optimization Suggestions

Performance (Score: 6/10)

HIGH IMPACT

Extract Inline Scripts to External Modules

`account.html` has ~1,200 lines of inline JS. External files are cacheable, minifiable, and testable. Biggest single performance win available.

HIGH IMPACT

Replace Tailwind CDN with Compiled Build

CDN loads ~350 KB per page. Compiling to used classes only would cut this to ~10-15 KB. Config already extracted to `tailwind-config.js`.

MEDIUM IMPACT

Cache Stripe API Responses

Menu page fetches all Stripe products on every load. Add a short TTL cache or edge function cache to reduce latency and API calls.

MEDIUM IMPACT

Static Asset Caching Headers

No Cache-Control headers configured. Images, JS, and CSS re-downloaded on every visit. Add via `vercel.json` headers config.

DONE

Image Optimization

42 MB → 2.4 MB (-94%). WebP conversion, source files relocated. Automated pipeline via `scripts/optimize-images.mjs`.

Architecture (Score: 6/10)

HIGH IMPACT

Add Build Pipeline

Raw HTML/CSS/JS served directly. No minification, bundling, or tree-shaking. An esbuild or Vite setup would improve load times and enable module imports.

PARTIAL

Shared Nav Component

Nav JS extracted to `shared.js`. Nav HTML still duplicated across 6 pages. Extract to a template or web component.

MEDIUM IMPACT

Shared Utility Module

`showToast`, `escHtml`, `formatPrice` duplicated across pages. Extract into a single `js/utils.js` file.

UX (Score: 7/10)

HIGH IMPACT

Order Review Step Before Payment

Currently clicks straight to Stripe. Add a confirmation modal showing items, quantities, variation selections, and total before redirect.

MEDIUM IMPACT

Product Price Live Update on Variation Select

When a customer selects a variation, update the displayed price in real time to reflect the delta.

MEDIUM IMPACT

Accessibility: Skip-to-Content and Touch Targets

No skip-to-content link. Avatar touch target is 30px (WCAG minimum: 44px). Add skip link and increase interactive element sizes.

Suggested Features

E-Commerce & Ordering

Pickup Time Slots

Let customers choose a pickup window at checkout. Reduces crowding and improves the experience.

Order-Ahead / Pre-Order

Accept orders for items baked on specific days. Sourdough schedules could drive pre-order demand.

Discount / Promo Codes

Stripe Coupons integration for seasonal promotions, first-time buyer discounts, and referral rewards.

Customer Engagement

Email Notifications

Order confirmation, shipping/pickup ready, and weekly menu announcements via transactional email.

Product Reviews

Star ratings and text reviews on product pages. Builds trust and provides social proof.

SEO & Discoverability

Structured Data (JSON-LD)

LocalBusiness, Product, and BreadcrumbList schema for rich search results.

Sitemap & Robots.txt

Auto-generated sitemap for product and menu pages. Proper robots.txt to guide crawlers.

Admin & Operations

Inventory Alerts

Notify admin when stock falls below threshold. Prevents overselling.

Sales Export

CSV export of orders and revenue for bookkeeping and tax prep.

Content

Blog / Recipes

About Page

Simple blog for sourdough tips, farm updates, and recipes. Drives organic traffic and engagement.

Farm story, team photos, mission statement. Builds emotional connection with customers.

Code Quality Assessment

Strengths (Score: 6/10)

- **Clean Supabase integration** -- RLS policies on all tables, proper auth flow, parameterized queries
- **Stripe best practices** -- Webhook signature verification, idempotent order creation, PCI-compliant checkout
- **Admin/customer separation** -- Role-based UI with admin-only sections properly gated
- **CMS-driven content** -- Landing page and menu fully editable without code changes
- **Modular API layer** -- Separate files for checkout, subscribe, portal, products, webhook
- **XSS prevention** -- `escHtml()` used on user-facing product names and descriptions

Areas for Improvement

- **Massive inline scripts** -- `account.html` has ~1,200 lines of inline JS. Not cacheable, not testable, blocks parsing.
- **No build pipeline** -- Raw HTML/CSS/JS served directly. No minification, bundling, or tree-shaking.
- **Tailwind CDN** -- ~350 KB loaded per page. Should compile to used classes only (~10-15 KB).
- **Variable naming inconsistency** -- `sb` vs `supabase`, `currentUser` vs `session.user` across pages.
- **Magic numbers** -- Toast timeouts (3000ms, 2800ms), no centralized constants.
- **No error boundaries** -- Network failures in product/menu loads show no fallback UI.
- **Duplicated fetch patterns** -- `/api/config` fetched on every page without session caching.

Security Posture (Score: 6/10)

AREA	STATUS	NOTES
Authentication	GOOD	Supabase Auth with email/password. Session management handled by SDK.
Row-Level Security	GOOD	RLS enabled on all tables. Policies restrict access by user ID and role.
Payment Security	GOOD	Stripe Checkout handles PCI compliance. No card data touches the server.
Webhook Verification	GOOD	Stripe webhook signature verified before processing.
CORS Policy	GOOD	Locked to `ALLOWED_ORIGIN` env var. Production set to `bloominacresmarket.com`.
Input Sanitization	GOOD	Supabase parameterized queries. `escHtml()` on rendered content.

AREA	STATUS	NOTES
Content-Security-Policy	MISSING	No CSP headers. Inline scripts unrestricted. Add via Vercel headers config.
HTTPS Enforcement	PARTIAL	Vercel serves HTTPS but no explicit redirect or HSTS header configured.
