Development Roadmap

Bloomin' Acres Market
Stage 7 — March 2026

Project Health

CURRENT SCORE	TARGET SCORE	PHASES	STATUS
8.6 / 10	**9.2** / 10	**4**	**Active**

Your website is scoring **8.6 out of 10** across security, performance, design, and usability. The next stage of development focuses on closing the gap to **9.2** through visual polish, mobile shopping improvements, a pickup scheduling system, and code quality upgrades. Here's what's coming.

What's Coming Next

Phase 1: Visual Design Upgrade

HIGH IMPACT

Making the site feel richer and more polished — the biggest visual jump yet.

- **Product page enrichment** — Texture overlays, ingredient tags, and an image gallery for browsing product photos
  Customers see a more immersive, appetizing product experience
- **Micro-interactions** — Smooth button animations, heart pulse when favoriting, card lift effects on the menu
  Small touches that make the site feel premium and responsive
- **Image optimization** — Responsive images that load the right size for each device, lazy loading for faster pages
  Faster load times, especially on mobile data connections

Phase 2: Mobile Shopping Experience

HIGH IMPACT

Optimizing the cart and checkout flow for phone users — where most of your customers browse.

- **Full-screen mobile cart** — Cart panel takes the full width on phones with larger tap targets and a sticky checkout button
  No more pinching or missing buttons on small screens
- **Touch-friendly menu** — Larger action buttons, sticky category navigation, native dropdowns on mobile
  Smoother browsing through your menu on any device
- **Cart thumbnails & subtotals** — Product images and running totals right in the cart
  Customers always know exactly what they're ordering

Development Roadmap

Bloomin' Acres Market
Stage 7 — March 2026

Phase 3: Pickup Time Slots

NEW FEATURE

A pickup scheduling system so customers choose when to pick up and you know what to expect.

- **Customer pickup selector** — During checkout, customers pick an available time slot for their order
  Works for both guest checkout and logged-in customers
- **Admin time slot manager** — Set your available pickup windows from the admin dashboard (days, times, capacity)
  Full control over when and how many orders you can handle
- **Capacity limits** — Optional max orders per slot, automatically tracked as orders come in
  No more guessing how many pickups to prepare for

Phase 4: Under-the-Hood Improvements

QUALITY

Code cleanup and reliability upgrades — not visible to customers, but keeps things running smoothly.

- **Better error handling** — Graceful recovery when network issues occur instead of silent failures
  Customers see helpful messages instead of blank screens
- **Code consolidation** — Reducing duplicated code for faster future updates and fewer bugs
  Makes adding new features quicker and more reliable

At a Glance

PHASE	WHAT IT DOES	CUSTOMER IMPACT	SCORE IMPACT
1. Visual Design	Richer product pages, animations, faster images	High	Visual: 7 → 9
2. Mobile Shopping	Better cart, touch targets, sticky nav	High	Navigation & Accessibility up
3. Pickup Slots	Schedule-based order fulfillment	High	New business feature
4. Code Quality	Error handling, code cleanup	Low	Code Quality: 8.5 → 9.5

Recently Completed

- Guest checkout (no account required to order)

- Admin product variant management (drag-and-drop reorder, availability toggles, inventory tracking)
- Content Security Policy hardening
- Glass morphism design treatment across all pages
- Visual calendar for menu schedule management
- CSS cache busting for instant style updates on deploy
