Bloomin' Acres

PROJECT STATUS REPORT

Prepared by OphidianAI

March 7, 2026

Version 2.0

INTELLIGENCE, ENGINEERED.

Executive Summary

Full-stack e-commerce platform for a sourdough bakery and fresh produce business.

8.5
out of 10

OVERALL SCORE

Visual Design	**9 / 10**
Navigation	**8 / 10**
Account Mgmt	**8 / 10**
Performance	**8 / 10** NEW
Mobile	**7 / 10**
User Journey	**7 / 10**
Checkout	**9 / 10** WAS 7

Tech Stack

HTML / CSS / JS · Supabase · Stripe · Vercel · Supabase Auth · Supabase Storage · Stripe Checkout · Stripe Webhooks

Project Status

AREA	STATUS	NOTES
Landing Page	LIVE	CMS-driven content, dynamic hero/cards/hours/contact
Public Menu	LIVE	Stripe product sync, section editor, draft preview
Product Pages	LIVE	Variations, stock tracking, inline admin editor
Customer Accounts	LIVE	Cart, favorites, orders, profile, club dashboard
Bread Box Club	LIVE	Subscriptions, box builder, referral rewards
Admin Dashboard	LIVE	7 tabs: catalogue, menu editor, saved menus, landing, orders, analytics, club
Checkout Flow	LIVE	Variation pricing and names verified working. CORS locked to production domain.
Performance	DONE	Images optimized (42 MB → 2.4 MB), shared JS extracted, fonts consolidated

AREA	STATUS	NOTES
SEO	DONE	Meta tags, Open Graph, JSON-LD, sitemap.xml, robots.txt deployed

What Changed

Updates since Version 1.0 (March 6, 2026)

Fixes Shipped

Checkout Back-Button Bug

Clicking checkout, then using browser back, would leave the checkout button permanently disabled. Fixed with `pageshow` event handler.

Favicon Added

All pages now show the Bloomin' Acres barn logo in the browser tab.

Basket Background 404

Cart panel background image was returning 404 after optimization. Fixed with WebP conversion from source.

Performance Optimization (Approach B)

Before / After Comparison

METRIC	BEFORE	AFTER	CHANGE
Brand assets size	42 MB	2.4 MB	**-94%**
Image format	PNG only	WebP + PNG	**Modern format**
Google Fonts requests	3 different	1 unified	**-67%**
Duplicated JS (nav)	6 copies	1 shared file	**-83%**
Duplicated JS (Tailwind config)	6 copies	1 shared file	**-83%**
Tailwind CDN	Unpinned	Pinned v3.4.17	**Cacheable**

Files Created

`js/shared.js` -- Navigation toggle, pageshow handler (shared across all 6 pages)

`js/tailwind-config.js` -- Unified Tailwind color/font config (both naming schemes)

`scripts/optimize-images.mjs` -- Image optimization pipeline (sharp)

Current Features

Customer-Facing Pages

Landing Page (index.html)

CMS-driven hero, product cards, hours, contact info. Admin-editable via landing tab.

Public Menu (menu.html)

Auto-synced from Stripe products. Section editor, drag-and-drop ordering, draft preview.

Product Detail (product.html)

Dynamic product pages with variation selector, stock badge, image gallery, admin inline editor.

Bread Box Club (club.html)

Subscription landing page with tier comparison, box builder, referral program, and member dashboard.

Account Dashboard

Cart & Checkout

Slide-out cart panel, quantity editing, Stripe Checkout redirect, order confirmation.

Favorites

Heart-toggle on product cards, persistent favorites list on account page.

Order History

Past orders with line items, totals, and status badges pulled from Stripe webhooks.

Profile Management

Name, email, phone, address. Password change via Supabase Auth.

Admin Dashboard

Catalogue Management

CRUD for products, variations, images, stock levels. Syncs to Stripe.

Menu Editor

Drag-and-drop section builder, product assignment, draft/publish workflow.

Landing Page Editor

Edit hero text, featured products, hours, and contact info in real time.

Order Management

View all orders, filter by status, mark as fulfilled.

Analytics

Club Management

Revenue chart, top products, order count, customer metrics.

Manage subscription tiers, view active subscribers, referral tracking.

Saved Menus

Save and restore menu configurations for seasonal rotations.

Backend & Integrations

Supabase Database

TABLE	PURPOSE	RLS
profiles	User profile data (name, phone, address)	ON
products	Product catalogue with Stripe sync	ON
product_variations	Size/type variations with price deltas	ON
orders	Order records from Stripe webhooks	ON
order_items	Line items for each order	ON
favorites	User product favorites	ON
cart_items	Persistent cart storage	ON
menu_sections	Menu layout configuration	ON
menu_section_products	Product-to-section assignments	ON
saved_menus	Saved menu configurations	ON
landing_content	CMS content for landing page	ON
subscriptions	Bread Box Club subscription records	ON
referrals	Referral tracking for club members	ON

Stripe Integration

ENDPOINT	PURPOSE
/api/stripe/checkout	Create Checkout Session for cart items
/api/stripe/subscribe	Create subscription checkout for Bread Box Club
/api/stripe/webhook	Handle payment confirmation, order creation
/api/stripe/config	Expose publishable key to frontend

Storage Buckets

BUCKET	PURPOSE	PUBLIC
product-images	Product photos uploaded by admin	YES
brand-assets	Logo, hero images, background textures	YES

Priority Issues

1. Checkout Variation Pricing Bug RESOLVED

Verified: `startCheckout()` passes `variation_delta` and `variation_name` to Stripe. `checkout.js` applies delta to `unit_amount` and appends variant label to product name.

2. Cart Display Missing Variation Names RESOLVED

Verified: `renderCart()` builds `varLabel` from `variation_name` and appends it to the product name display.

3. API CORS Headers Locked Down RESOLVED

All 4 API endpoints use `ALLOWED_ORIGIN` env var (not wildcard). Production set to `https://bloominacresmarket.com`. Webhook has no CORS (server-to-server).

4. SEO Meta Tags Implemented RESOLVED

All pages have meta descriptions, Open Graph tags, Twitter cards, and JSON-LD structured data. `sitemap.xml` and `robots.txt` deployed.

5. Checkout Back-Button Disabled RESOLVED

Previously: clicking checkout then using browser back left button permanently disabled. Fixed with `pageshow` event handler in `js/shared.js`.

6. Footer Nav Broken Link UX

`index.html` footer has `href="#menu"` which doesn't exist. Should link to `menu.html`.

7. Social Media Placeholder Links CONTENT

Instagram and Facebook icons link to #.

8. Footer Copyright Year Inconsistency POLISH

`product.html` and `menu.html` show "2025" while others show "2026".

Optimization Suggestions

Performance

HIGH IMPACT

Replace Tailwind CDN with Compiled Build

CDN now pinned to v3.4.17 and config extracted. Full compilation deferred to future sprint.

MEDIUM IMPACT

Cache Stripe API Responses

Menu page fetches all Stripe products on every load. Add a short TTL cache or edge function cache to reduce latency and API calls.

DONE

Image Optimization

Completed. 42 MB → 2.4 MB. WebP conversion, source files relocated. Automated pipeline via `scripts/optimize-images.mjs`.

LOW IMPACT

Static Asset Caching Headers

Add Cache-Control headers for images and JS files via Vercel config. Currently no caching policy set.

Architecture

PARTIAL

Shared Nav Component

Nav JS extracted to `shared.js`. Nav HTML still duplicated across 6 pages -- deferred to future sprint.

LOW IMPACT

Shared Utility Module

`showToast`, `escHtml`, `formatPrice` still duplicated across pages. Extract into a shared utilities file.

UX Improvements

MEDIUM IMPACT

Product Price Live Update

When a customer selects a variation, update the displayed price in real time to reflect the delta.

LOW IMPACT

Loading Timeout Fallback

If Supabase or Stripe is slow, show a friendly timeout message instead of an infinite spinner.

Suggested Features

E-Commerce & Ordering

Pickup Time Slots

Let customers choose a pickup window at checkout. Reduces crowding and improves the experience.

Order-Ahead / Pre-Order

Accept orders for items baked on specific days. Sourdough schedules could drive pre-order demand.

Discount / Promo Codes

Stripe Coupons integration for seasonal promotions, first-time buyer discounts, and referral rewards.

Customer Engagement

Email Notifications

Order confirmation, shipping/pickup ready, and weekly menu announcements via transactional email.

Product Reviews

Star ratings and text reviews on product pages. Builds trust and provides social proof.

SEO & Discoverability

Structured Data (JSON-LD)

LocalBusiness, Product, and BreadcrumbList schema for rich search results.

Sitemap & Robots.txt

Auto-generated sitemap for product and menu pages. Proper robots.txt to guide crawlers.

Admin & Operations

Inventory Alerts

Notify admin when stock falls below threshold. Prevents overselling.

Sales Export

CSV export of orders and revenue for bookkeeping and tax prep.

Content

Blog / Recipes

About Page

Simple blog for sourdough tips, farm updates, and recipes. Drives organic traffic and engagement.

Farm story, team photos, mission statement. Builds emotional connection with customers.

Code Quality Assessment

Strengths

- **Clean Supabase integration** -- RLS policies on all tables, proper auth flow
- **Stripe best practices** -- Webhook verification, idempotent order creation
- **Admin/customer separation** -- Role-based UI with admin-only sections properly gated
- **Responsive design** -- Tailwind utility classes with mobile-first approach
- **CMS-driven content** -- Landing page and menu fully editable without code changes
- **Shared configuration** -- Tailwind config and nav logic extracted to single files NEW IN V2
- **Image pipeline** -- Automated optimization script for brand assets NEW IN V2
- **Consistent font loading** -- Single Google Fonts request across all pages NEW IN V2

Areas for Improvement

- **Code duplication** -- Nav HTML still copied across 6 pages (JS extracted, HTML remains)
- **No build pipeline** -- Raw HTML/CSS/JS served directly. No minification, bundling, or tree-shaking.
- **Tailwind CDN** -- Pinned but still CDN-loaded (~350 KB per page). Should compile to used classes only.
- **Missing skip-to-content link** -- Accessibility gap for keyboard and screen reader users
- **CORS configuration** -- FIXED Locked to production domain via `ALLOWED_ORIGIN` env var
- **SEO foundation** -- FIXED Sitemap, robots.txt, meta tags, OG tags, and JSON-LD deployed

Security Posture

AREA	STATUS	NOTES
Authentication	GOOD	Supabase Auth with email/password. Session management handled by SDK.
Row-Level Security	GOOD	RLS enabled on all tables. Policies restrict access by user ID and role.
Payment Security	GOOD	Stripe Checkout handles PCI compliance. No card data touches the server.
Webhook Verification	GOOD	Stripe webhook signature verified before processing.
CORS Policy	GOOD	Locked to `ALLOWED_ORIGIN` env var. Production set to `bloominacresmarket.com`.

AREA	STATUS	NOTES
Input Sanitization	GOOD	Supabase parameterized queries prevent SQL injection.
