Bloomin' Acres

PROJECT STATUS REPORT

Prepared by OphidianAI

March 8, 2026

Version 6.0

INTELLIGENCE, ENGINEERED.

Executive Summary

Full-stack e-commerce platform for a sourdough bakery and fresh produce business.

8.6
out of 10

OVERALL SCORE

Security	9 / 10 ↑
Checkout	9.5 / 10 ↑
SEO	8 / 10
Navigation	8 / 10
Accessibility	8 / 10
Mobile	8.5 / 10 ↑
Performance	9 / 10
Visual Design	7 / 10
Code Quality	8.5 / 10 ↑
User Journey	8.5 / 10 ↑

Tech Stack

HTML / CSS / JS · Tailwind CSS (compiled) · Supabase · Stripe · Vercel · Supabase Auth · Supabase Storage · Stripe Checkout · Stripe Webhooks

Project Status

AREA	STATUS	NOTES
Landing Page	LIVE	CMS-driven content, dynamic hero/cards/hours/contact
Public Menu	LIVE	Stripe product sync, section editor, draft preview
Product Pages	LIVE	Variations, stock tracking, inline admin editor
Customer Accounts	LIVE	Cart, favorites, orders, profile, club dashboard
Bread Box Club	LIVE	Subscriptions, box builder, referral rewards
Admin Dashboard	LIVE	7 tabs: catalogue, menu editor, saved menus, landing, orders, analytics, club
Checkout Flow	LIVE	Guest + authenticated checkout. localStorage cart, slide-out cart panel, Stripe Checkout. Stock validation, variation pricing, CORS locked.
Performance	DONE	Images optimized (-94%), Tailwind compiled (350 KB → 5.5 KB), inline scripts extracted to cacheable modules, shared JS utilities, caching headers, build pipeline
SEO	DONE	Meta tags, Open Graph, JSON-LD, canonical tags, sitemap.xml, robots.txt deployed
Security	DONE	CSP, HSTS, X-Frame-Options, nosniff, Referrer-Policy, Permissions-Policy
Accessibility	DONE	Skip-to-content links, 44px touch targets, focus indicators, ARIA labels

What Changed

Updates since Version 5.0 (March 8, 2026)

Guest Checkout (New Feature)

localStorage Cart for All Visitors

New shared `js/cart.js` module stores cart items in localStorage. All visitors can add items to cart without an account. Logged-in users get dual-write (localStorage + Supabase sync). Cart merges into Supabase on login.

Cart Panel & Floating Icon

Slide-out cart panel on menu page with quantity controls, item totals, and estimated total. Floating cart icon with badge count on all pages. Auto-opens via `?cart=open` URL param.

Guest Checkout Flow

New `api/stripe/guest-checkout.js` endpoint. Guests enter name + email, server creates a Supabase account silently (auto-account model), then redirects to Stripe Checkout. Orders are attributed. Sign-in nudge shown for club rewards.

Auth Gates Removed from Cart

"Add to Cart" buttons on menu and product pages no longer require sign-in. Favorite buttons remain account-only. Cart wiring refactored from async Supabase-only to sync localStorage-first with optional Supabase sync.

Bug Fixes & Polish

Content Security Policy Updates

CSP updated to allow Google Maps iframes, Stripe Checkout frames, placeholder images, and Stripe API connections. `frame-src`, `img-src`, `connect-src`, `script-src`, and `form-action` directives all tightened to specific domains.

JS Cache Busting & Cache Headers

All JS and CSS script tags now use `?v=N` query params for cache busting. JS `Cache-Control` changed from 24-hour to `must-revalidate` to prevent stale scripts after deploys.

Landing Page Content Fix

IntersectionObserver for scroll animations was running before DOM parsed (introduced during script extraction). Wrapped in `DOMContentLoaded`. All sections now animate correctly on scroll.

Menu Page Flash Fix

SEO fallback text was visible during load before JS replaced it with the dynamic menu. Now hidden by default; skeleton shimmer shows instead. Schedule dates moved inside the menu card for better legibility.

Current Features

Customer-Facing Pages

Landing Page (index.html)
CMS-driven hero, product cards, hours, contact info. Admin-editable via landing tab.

Public Menu (menu.html)
Auto-synced from Stripe products. Section editor, drag-and-drop ordering, draft preview.

Product Detail (product.html)
Dynamic product pages with variation selector, stock badge, image gallery, admin inline editor.

Bread Box Club (club.html)
Subscription landing page with tier comparison, box builder, referral program, and member dashboard.

Account Dashboard

Cart & Checkout
Slide-out cart panel, quantity editing, Stripe Checkout redirect, order confirmation.

Favorites
Heart-toggle on product cards, persistent favorites list on account page.

Order History
Past orders with line items, totals, and status badges pulled from Stripe webhooks.

Profile Management
Name, email, phone, address. Password change via Supabase Auth.

Admin Dashboard

Catalogue Management
CRUD for products, variations, images, stock levels. Syncs to Stripe.

Menu Editor
Drag-and-drop section builder, product assignment, draft/publish workflow.

Landing Page Editor
Edit hero text, featured products, hours, and contact info in real time.

Order Management
View all orders, filter by status, mark as fulfilled.

Analytics
Revenue chart, top products, order count, customer metrics.

Club Management
Manage subscription tiers, view active subscribers, referral tracking.

Saved Menus
Save and restore menu configurations for seasonal rotations.

Backend & Integrations

Supabase Database

TABLE	PURPOSE	RLS
profiles	User profile data (name, phone, address)	ON
products	Product catalogue with Stripe sync	ON
product_variations	Size/type variations with price deltas	ON
orders	Order records from Stripe webhooks	ON
order_items	Line items for each order	ON
favorites	User product favorites	ON
cart_items	Persistent cart storage	ON
menu_sections	Menu layout configuration	ON
menu_section_products	Product-to-section assignments	ON
saved_menus	Saved menu configurations	ON
landing_content	CMS content for landing page	ON
subscriptions	Bread Box Club subscription records	ON
referrals	Referral tracking for club members	ON

Stripe Integration

ENDPOINT	PURPOSE
/api/stripe/checkout	Create Checkout Session for authenticated users
/api/stripe/guest-checkout	Guest checkout: auto-create Supabase user + Stripe session
/api/stripe/subscribe	Create subscription checkout for Bread Box Club
/api/stripe/webhook	Handle payment confirmation, order creation
/api/stripe/config	Expose publishable key to frontend

Storage Buckets

BUCKET	PURPOSE	PUBLIC
product-images	Product photos uploaded by admin	YES
brand-assets	Logo, hero images, background textures	YES

Priority Issues

Open Issues

1. Massive Inline Scripts RESOLVED

All inline scripts extracted to external `js/<page>.js` modules. HTML files reduced by 60-70%. Scripts now cacheable and minifiable.

2. No Guest Checkout RESOLVED

Full guest checkout implemented. localStorage cart, slide-out cart panel, guest checkout modal with auto-account creation. Cart merges on login. Auth gates removed from add-to-cart buttons.

3. Duplicated Utility Functions RESOLVED

Extracted `showToast()`, `escHtml()`, `formatPrice()` into shared `js/utils.js`. Standardized toast timeouts to 3000ms across all pages.

4. Instagram Social Link RESOLVED

Footer Instagram icon now links to `instagram.com/bloominacresmarket`.

Previously Resolved

ISSUE	STATUS
No Content-Security-Policy headers	RESOLVED
No order review before payment	RESOLVED
Product pages lack dynamic SEO	RESOLVED
Cart has no stock validation	RESOLVED
Undersized touch targets	RESOLVED
No skip-to-content links	RESOLVED
No canonical tags	RESOLVED
No static asset caching	RESOLVED
Checkout variation pricing bug	RESOLVED
Cart missing variation names	RESOLVED
CORS wildcard headers	RESOLVED
Missing SEO meta tags	RESOLVED
Checkout back-button disabled	RESOLVED
Copyright year inconsistency	RESOLVED
Tailwind CDN (~350 KB per page)	RESOLVED
No build pipeline	RESOLVED
Duplicated utility functions	RESOLVED
Production API crash (ALLOWED_ORIGIN newline)	RESOLVED
Massive inline scripts (3,200+ lines across 6 files)	RESOLVED
Instagram social link placeholder	RESOLVED
No guest checkout (account required to purchase)	RESOLVED
Google Maps iframe blocked by CSP	RESOLVED
Landing page content invisible (IntersectionObserver timing)	RESOLVED
Menu page SEO fallback flash on load	RESOLVED
Stale JS served from browser cache after deploy	RESOLVED

Optimization Suggestions

Performance (Score: 9/10)

DONE **Extract Inline Scripts to External Modules**
All 6 pages now use external `js/<page>.js` files. Scripts are cacheable, minifiable, and testable. HTML files reduced by 60-70%.

DONE **Replace Tailwind CDN with Compiled Build**
CDN (~350 KB) replaced with compiled, minified CSS (5.5 KB). Tailwind CLI build runs automatically on deploy.

MEDIUM IMPACT **Cache Stripe API Responses**
Menu page fetches all Stripe products on every load. Add a short TTL cache or edge function cache to reduce latency and API calls.

DONE **Static Asset Caching Headers**
Brand assets: 1-year immutable. CSS/JS: 1-day with 7-day stale-while-revalidate. Configured via `vercel.json`.

DONE **Image Optimization**
42 MB → 2.4 MB (-94%). WebP conversion, source files relocated. Automated pipeline via `scripts/optimize-images.mjs`.

Architecture (Score: 8/10)

DONE **Add Build Pipeline**
Tailwind CLI build step added via `npm run build`. Vercel runs it automatically on deploy. Foundation for future JS bundling.

PARTIAL **Shared Nav Component**
Nav JS extracted to `shared.js`. Nav HTML still duplicated across 6 pages. Extract to a template or web component.

DONE **Shared Utility Module**
`showToast`, `escHtml`, `formatPrice` extracted into `js/utils.js`. Removed duplicates from 5 HTML files.

UX (Score: 8.5/10)

DONE **Order Review Step Before Payment**
Confirmation modal shows itemized summary with quantities, variations, and total. Stock validated before confirm. Disable button if stock insufficient.

DONE **Product Price Live Update on Variation Select**
Selecting a variation pill updates the displayed price in real time to reflect the delta.

DONE **Accessibility: Skip-to-Content and Touch Targets**
Skip-to-content on all pages. Avatar 36px with 44px touch area. Form inputs min-height 44px. Focus-visible styles on all interactive elements.

Suggested Features

E-Commerce & Ordering

Pickup Time Slots
Let customers choose a pickup window at checkout. Reduces crowding and improves the experience.

Order-Ahead / Pre-Order
Accept orders for items baked on specific days. Sourdough schedules could drive pre-order demand.

Discount / Promo Codes
Stripe Coupons integration for seasonal promotions, first-time buyer discounts, and referral rewards.

Customer Engagement

Email Notifications
Order confirmation, shipping/pickup ready, and weekly menu announcements via transactional email.

Product Reviews
Star ratings and text reviews on product pages. Builds trust and provides social proof.

SEO & Discoverability

Google Business Profile Integration
Link website to Google Business Profile for local search visibility. Display Google reviews on landing page.

Product Schema Enhancements
Add Product schema with price, availability, and review data for rich search snippets. Drive organic traffic from product searches.

Admin & Operations

Inventory Alerts
Notify admin when stock falls below threshold. Prevents overselling.

Sales Export
CSV export of orders and revenue for bookkeeping and tax prep.

Content

Blog / Recipes
Simple blog for sourdough tips, farm updates, and recipes. Drives organic traffic and engagement.

About Page
Farm story, team photos, mission statement. Builds emotional connection with customers.

Code Quality Assessment

Strengths (Score: 8.5/10)

- **Clean Supabase integration** -- RLS policies on all tables, proper auth flow, parameterized queries
- **Stripe best practices** -- Webhook signature verification, idempotent order creation, PCI-compliant checkout
- **Admin/customer separation** -- Role-based UI with admin-only sections properly gated
- **CMS-driven content** -- Landing page and menu fully editable without code changes
- **Modular JS architecture** -- Each page has a dedicated external JS module. Shared utilities in `js/utils.js`, nav logic in `js/shared.js`
- **XSS prevention** -- `escHtml()` used on user-facing product names and descriptions
- **Stock validation** -- Dual client + server validation prevents overselling at checkout
- **Security headers** -- CSP, HSTS, X-Frame-Options, nosniff, Referrer-Policy configured
- **Build pipeline** -- Tailwind CLI compiles CSS automatically on deploy via `vercel.json buildCommand`
- **Modular API layer** -- Separate files for checkout, subscribe, portal, products, webhook

Areas for Improvement

- **JS bundling & minification** -- Scripts are external but served raw. Future: add esbuild for bundling and minification.
- **Variable naming inconsistency** -- `sb` vs `supabase`, `currentUser` vs `session.user` across pages.
- **Magic numbers** -- Toast timeout standardized (3000ms) but other constants still scattered.
- **No error boundaries** -- Network failures in product/menu loads show no fallback UI.
- **Duplicated fetch patterns** -- `/api/config` fetched on every page without session caching.

Security Posture (Score: 9/10)

AREA	STATUS	NOTES
Authentication	GOOD	Supabase Auth with email/password. Session management handled by SDK.
Row-Level Security	GOOD	RLS enabled on all tables. Policies restrict access by user ID and role.
Payment Security	GOOD	Stripe Checkout handles PCI compliance. No card data touches the server.
Webhook Verification	GOOD	Stripe webhook signature verified before processing.
CORS Policy	GOOD	Locked to `ALLOWED_ORIGIN` env var. Production set to `bloominacresmarket.com`.
Input Sanitization	GOOD	Supabase parameterized queries. `escHtml()` on rendered content.
Content-Security-Policy	GOOD	Full CSP with tightened whitelist (CDN sources removed). All inline scripts extracted to external modules.
HTTPS Enforcement	GOOD	HSTS configured with 2-year max-age, includeSubDomains, and preload directive.
Stock Validation	GOOD	Client-side check in review modal + server-side enforcement in checkout API.
Guest Checkout	GOOD	Server-side user creation via admin API. Random password, auto-confirm. Email validation. Same stock checks as authenticated flow.
