# Bloomin' Acres

## PROJECT STATUS REPORT

Prepared by OphidianAI

March 7, 2026

Version 2.0

INTELLIGENCE, ENGINEERED.

# Executive Summary

Full-stack e-commerce platform for a sourdough bakery and fresh produce business.

**8.0**
out of 10

OVERALL SCORE

| | |
|---|---|
| Visual Design | **9 / 10** |
| Navigation | **8 / 10** |
| Account Mgmt | **8 / 10** |
| Performance | **8 / 10** NEW |
| Mobile | **7 / 10** |
| User Journey | **7 / 10** |
| Checkout | **7 / 10** WAS 6 |

## Tech Stack

HTML / CSS / JS · Supabase · Stripe · Vercel · Supabase Auth · Supabase Storage · Stripe Checkout · Stripe Webhooks

## Project Status

| AREA | STATUS | NOTES |
|---|---|---|
| Landing Page | LIVE | CMS-driven content, dynamic hero/cards/hours/contact |
| Public Menu | LIVE | Stripe product sync, section editor, draft preview |
| Product Pages | LIVE | Variations, stock tracking, inline admin editor |
| Customer Accounts | LIVE | Cart, favorites, orders, profile, club dashboard |
| Bread Box Club | LIVE | Subscriptions, box builder, referral rewards |
| Admin Dashboard | LIVE | 7 tabs: catalogue, menu editor, saved menus, landing, orders, analytics, club |
| Checkout Flow | BUG | Variation price delta not passed to Stripe -- see Priority Issues |
| Performance | DONE | Images optimized (42 MB → 2.4 MB), shared JS extracted, fonts consolidated |

| AREA | STATUS | NOTES |
| --- | --- | --- |
| SEO | MISSING | No meta descriptions, Open Graph tags, or structured data |

# What Changed

Updates since Version 1.0 (March 6, 2026)

## Fixes Shipped

### Checkout Back-Button Bug

Clicking checkout, then using browser back, would leave the checkout button permanently disabled. Fixed with `pageshow` event handler.

### Favicon Added

All pages now show the Bloomin' Acres barn logo in the browser tab.

### Basket Background 404

Cart panel background image was returning 404 after optimization. Fixed with WebP conversion from source.

## Performance Optimization (Approach B)

### Before / After Comparison

| METRIC | BEFORE | AFTER | CHANGE |
|---|---|---|---|
| Brand assets size | 42 MB | 2.4 MB | **-94%** |
| Image format | PNG only | WebP + PNG | **Modern format** |
| Google Fonts requests | 3 different | 1 unified | **-67%** |
| Duplicated JS (nav) | 6 copies | 1 shared file | **-83%** |
| Duplicated JS (Tailwind config) | 6 copies | 1 shared file | **-83%** |
| Tailwind CDN | Unpinned | Pinned v3.4.17 | **Cacheable** |

## Files Created

`js/shared.js` -- Navigation toggle, pageshow handler (shared across all 6 pages)

`js/tailwind-config.js` -- Unified Tailwind color/font config (both naming schemes)

`scripts/optimize-images.mjs` -- Image optimization pipeline (sharp)

# Current Features

## Customer-Facing Pages

### Landing Page (index.html)

CMS-driven hero, product cards, hours, contact info. Admin-editable via landing tab.

### Public Menu (menu.html)

Auto-synced from Stripe products. Section editor, drag-and-drop ordering, draft preview.

### Product Detail (product.html)

Dynamic product pages with variation selector, stock badge, image gallery, admin inline editor.

### Bread Box Club (club.html)

Subscription landing page with tier comparison, box builder, referral program, and member dashboard.

## Account Dashboard

### Cart & Checkout

Slide-out cart panel, quantity editing, Stripe Checkout redirect, order confirmation.

### Favorites

Heart-toggle on product cards, persistent favorites list on account page.

### Order History

Past orders with line items, totals, and status badges pulled from Stripe webhooks.

### Profile Management

Name, email, phone, address. Password change via Supabase Auth.

## Admin Dashboard

### Catalogue Management

CRUD for products, variations, images, stock levels. Syncs to Stripe.

### Menu Editor

Drag-and-drop section builder, product assignment, draft/publish workflow.

### Landing Page Editor

Edit hero text, featured products, hours, and contact info in real time.

### Order Management

View all orders, filter by status, mark as fulfilled.

### Analytics

### Club Management

Revenue chart, top products, order count, customer metrics.

Manage subscription tiers, view active subscribers, referral tracking.

**Saved Menus**

Save and restore menu configurations for seasonal rotations.

# Backend & Integrations

## Supabase Database

| TABLE | PURPOSE | RLS |
|---|---|---|
| profiles | User profile data (name, phone, address) | ON |
| products | Product catalogue with Stripe sync | ON |
| product_variations | Size/type variations with price deltas | ON |
| orders | Order records from Stripe webhooks | ON |
| order_items | Line items for each order | ON |
| favorites | User product favorites | ON |
| cart_items | Persistent cart storage | ON |
| menu_sections | Menu layout configuration | ON |
| menu_section_products | Product-to-section assignments | ON |
| saved_menus | Saved menu configurations | ON |
| landing_content | CMS content for landing page | ON |
| subscriptions | Bread Box Club subscription records | ON |
| referrals | Referral tracking for club members | ON |

## Stripe Integration

| ENDPOINT | PURPOSE |
|---|---|
| /api/stripe/checkout | Create Checkout Session for cart items |
| /api/stripe/subscribe | Create subscription checkout for Bread Box Club |
| /api/stripe/webhook | Handle payment confirmation, order creation |
| /api/stripe/config | Expose publishable key to frontend |

## Storage Buckets

| BUCKET | PURPOSE | PUBLIC |
|---|---|---|
| product-images | Product photos uploaded by admin | YES |
| brand-assets | Logo, hero images, background textures | YES |

# Priority Issues

### 1. Checkout Variation Pricing Bug CRITICAL

`account.html`: `variation_delta` and `variation_name` are not passed to `/api/stripe/checkout`. Revenue leakage risk.

### 2. Cart Display Missing Variation Names CRITICAL

`renderCart()` shows product name only. Customers cannot tell which variant is in their cart.

### 3. API CORS Headers Too Permissive SECURITY

`Access-Control-Allow-Origin: *` on checkout, subscribe, and config endpoints. Lock to production domain before launch.

### 4. Missing SEO Meta Tags SEO

No meta descriptions on menu/club/product/admin pages. `index.html` has them but others don't. No JSON-LD structured data.

### 5. Checkout Back-Button Disabled RESOLVED

Previously: clicking checkout then using browser back left button permanently disabled. Fixed with `pageshow` event handler in `js/shared.js`.

### 6. Footer Nav Broken Link UX

`index.html` footer has `href="#menu"` which doesn't exist. Should link to `menu.html`.

### 7. Social Media Placeholder Links CONTENT

Instagram and Facebook icons link to `#`.

### 8. Footer Copyright Year Inconsistency POLISH

`product.html` and `menu.html` show "2025" while others show "2026".

# Optimization Suggestions

## Performance

HIGH IMPACT

**Replace Tailwind CDN with Compiled Build**

CDN now pinned to v3.4.17 and config extracted. Full compilation deferred to future sprint.

MEDIUM IMPACT

**Cache Stripe API Responses**

Menu page fetches all Stripe products on every load. Add a short TTL cache or edge function cache to reduce latency and API calls.

DONE

**Image Optimization**

Completed. 42 MB → 2.4 MB. WebP conversion, source files relocated. Automated pipeline via `scripts/optimize-images.mjs`.

LOW IMPACT

**Static Asset Caching Headers**

Add Cache-Control headers for images and JS files via Vercel config. Currently no caching policy set.

## Architecture

PARTIAL

**Shared Nav Component**

Nav JS extracted to `shared.js`. Nav HTML still duplicated across 6 pages -- deferred to future sprint.

LOW IMPACT

**Shared Utility Module**

`showToast`, `escHtml`, `formatPrice` still duplicated across pages. Extract into a shared utilities file.

## UX Improvements

MEDIUM IMPACT

**Product Price Live Update**

When a customer selects a variation, update the displayed price in real time to reflect the delta.

LOW IMPACT

**Loading Timeout Fallback**

If Supabase or Stripe is slow, show a friendly timeout message instead of an infinite spinner.

# Suggested Features

## E-Commerce & Ordering

### Pickup Time Slots

Let customers choose a pickup window at checkout. Reduces crowding and improves the experience.

### Order-Ahead / Pre-Order

Accept orders for items baked on specific days. Sourdough schedules could drive pre-order demand.

### Discount / Promo Codes

Stripe Coupons integration for seasonal promotions, first-time buyer discounts, and referral rewards.

## Customer Engagement

### Email Notifications

Order confirmation, shipping/pickup ready, and weekly menu announcements via transactional email.

### Product Reviews

Star ratings and text reviews on product pages. Builds trust and provides social proof.

## SEO & Discoverability

### Structured Data (JSON-LD)

LocalBusiness, Product, and BreadcrumbList schema for rich search results.

### Sitemap & Robots.txt

Auto-generated sitemap for product and menu pages. Proper robots.txt to guide crawlers.

## Admin & Operations

### Inventory Alerts

Notify admin when stock falls below threshold. Prevents overselling.

### Sales Export

CSV export of orders and revenue for bookkeeping and tax prep.

## Content

### Blog / Recipes

### About Page

Simple blog for sourdough tips, farm updates, and recipes. Drives organic traffic and engagement.

Farm story, team photos, mission statement. Builds emotional connection with customers.

# Code Quality Assessment

## Strengths

- **Clean Supabase integration** -- RLS policies on all tables, proper auth flow
- **Stripe best practices** -- Webhook verification, idempotent order creation
- **Admin/customer separation** -- Role-based UI with admin-only sections properly gated
- **Responsive design** -- Tailwind utility classes with mobile-first approach
- **CMS-driven content** -- Landing page and menu fully editable without code changes
- **Shared configuration** -- Tailwind config and nav logic extracted to single files NEW IN V2
- **Image pipeline** -- Automated optimization script for brand assets NEW IN V2
- **Consistent font loading** -- Single Google Fonts request across all pages NEW IN V2

## Areas for Improvement

- **Code duplication** -- Nav HTML still copied across 6 pages (JS extracted, HTML remains)
- **No build pipeline** -- Raw HTML/CSS/JS served directly. No minification, bundling, or tree-shaking.
- **Tailwind CDN** -- Pinned but still CDN-loaded (~350 KB per page). Should compile to used classes only.
- **Missing skip-to-content link** -- Accessibility gap for keyboard and screen reader users
- **CORS configuration** -- Wildcard origin on API endpoints. Must lock before production launch.
- **No sitemap or robots.txt** -- Search engines cannot efficiently discover or index pages

## Security Posture

| AREA | STATUS | NOTES |
|---|---|---|
| Authentication | GOOD | Supabase Auth with email/password. Session management handled by SDK. |
| Row-Level Security | GOOD | RLS enabled on all tables. Policies restrict access by user ID and role. |
| Payment Security | GOOD | Stripe Checkout handles PCI compliance. No card data touches the server. |
| Webhook Verification | GOOD | Stripe webhook signature verified before processing. |
| CORS Policy | NEEDS FIX | Wildcard origin on API routes. Must restrict to production domain. |

| AREA | STATUS | NOTES |
| --- | --- | --- |
| Input Sanitization | GOOD | Supabase parameterized queries prevent SQL injection. |
